Why take this course?

We will explore the challenges that machine learning (ML) systems face when they move from the laboratory into the real world. We will be inspired by machine learning applied to problems from astronomy, planetary science, autonomous driving, criminal justice, marketing, etc.!

Ask yourself: What obstacles make machine learning hard to deploy?

In this course:

We will identify ML challenges and develop strategies for addressing them. Specifically, you will:

1. Create a data set profile to provide early warning of possible issues
2. Employ techniques for handling missing data, class imbalance, sampling bias, noisy data, and other data challenges
3. Select appropriate evaluation methods given the data set properties and deployment (end-user) goals
4. Explore methods for model explainability and calibration to increase user trust
5. Employ methods for monitoring model performance, handling domain shift, and updating models to ensure reliable deployment
6. Apply and compare these methods on a data set of your choice and share your findings with the course community

Prerequisites

This course is designed for graduate students with prior ML experience (CS 434 or CS/AI 534 or equivalent).

Required skills:

- Train and evaluate supervised learning models (e.g., using scikit-learn in Python or equivalent)
- Good programming skills, including design and documentation
- Good communication skills (for in-class discussions, assignment write-ups, and project presentation)
Expectations

Of students:
• Take charge of your success (use resources, ask for help)
• Arrive prepared for and maintain focus during class meetings
• Read each assignment’s grading rubric before submitting work and ask questions if the expectations are unclear
• Complete assignments on time
• Contribute to a positive learning environment
• Follow OSU Code of Conduct: https://beav.es/codeofconduct

Of the instructor:
• Provide informative class experiences and opportunities for practice (assignments, in-class activities)
• Provide timely feedback on student work
• Respect student time & workload (Note: 1 credit = 2 hours outside class)
• Answer questions, provide guidance, and communicate clearly

Coursework
• Readings: You will provide short responses to relevant readings that highlight machine learning challenges (and solutions).
• Assignments: Short assignments in the first half of the term will enable you to compare alternative solutions to a particular challenge.
• Final Project: This course is centered on giving you the opportunity to detect, characterize, and address challenges in using machine learning on a data set of your choice. You will choose a data set, identify its challenges, evaluate solutions, and share your results in a written report and brief in-class presentation.

Academic Integrity

All work that you submit should be yours alone, except when explicitly indicated in the instructions. You may not look at or share others’ solutions, write-ups, or code. For the final project, discussing your project and strategizing with others is encouraged, so long as the content you submit for grading is your own.

If you employ code found on the Web, you must give credit to the original author and identify which parts are yours versus theirs.

Ensure you are familiar with what is and is not allowed and the OSU Academic Integrity Process (see https://studentlife.oregonstate.edu/studentconduct/academicmisconduct).

If you are stuck, ask me for help. I want you to succeed!

Dr. Kiri Wagstaff
kiri.wagstaff@oregonstate.edu
Late Work Policy

To encourage planning ahead, late assignments or project components incur a penalty of 2% for each hour they are late. E.g., if you submit 5 hours late, the maximum score is reduced by 10%. No late work is accepted after 25 hours (50% penalty) have elapsed.

If an issue such as an illness or life crisis will prevent you from submitting your work on time, email me at least 8 hours before the deadline to request an extension. I will do my best to work with you.

COVID-19 Safety Precautions

(Follow the latest OSU guidance, since this may become outdated)

Masks and vaccines are required by OSU policy. These practices have been shown to effectively reduce viral transmission. Exceptions must be approved through Disability Access Services (let me know if you need guidance). Please ensure you are familiar with, and compliant with, OSU’s policy (which derives from the CDC and the Oregon Health Authority): https://covid.oregonstate.edu/face-covering-guidance-public-health-policy

If you test positive, have COVID-19 symptoms, or are unvaccinated and have been exposed to COVID-19, follow OSU reporting / quarantine guidelines: https://covid.oregonstate.edu/positive-case-notification

If you are unable to attend a class session, please review the recording, then send me an email summary of what you heard and saw, along with your comments and questions.

Please give everyone more personal space than you’re used to from pre-COVID times.

Do not eat or drink inside the classroom, but instead step outside and away from others in order to remove your mask and eat or drink.

Let me know if you forget your mask or need other assistance. Please share with me any concerns or questions you may have, at any time. Frequently asked questions: https://covid.oregonstate.edu/faq

Accommodations

Accommodations for students with disabilities are determined and approved by Disability Access Services (DAS). If you, as a student, believe you are eligible for accommodations but have not obtained approval please contact DAS immediately at 541-737-4098 or at http://ds.oregonstate.edu/. DAS notifies students and faculty members of approved academic accommodations and coordinates implementation of those accommodations. While not required, students and faculty members are encouraged to discuss details of the implementation of individual accommodations.

OSU culture strives toward deepening respect for and understanding of religious differences within our community.

Reach Out for Success

Setbacks can happen. If you encounter difficulties and need assistance, it’s important to reach out. Consider discussing the situation with an instructor or academic advisor. Learn about resources for wellness and academic success at http://oregonstate.edu/ReachOut. If you are in immediate crisis, please contact the Crisis Text Line by texting OREGON to 741-741 or call the National Suicide Prevention Lifeline at 1-800-273-TALK (8255).

Final Words

I am dedicated to the creation and maintenance of a positive learning environment. Be sure you read and understand these guidelines. Most of all - let’s have fun as we tackle and solve machine learning challenges together!!
