

The State of AI and Questions We All Should Be Asking

Kiri L. Wagstaff

Fellow, Association for the Advancement of Artificial Intelligence (AAAI)

NASA Jet Propulsion Laboratory (2003-2022); Oregon State Univ. (2019+)

OSU AI Week, April 28, 2025

Dr. Kiri Wagstaff

- Computer Science, AI, Machine Learning (Ph.D.)
 - Geology (M.S.), Library and Information Science (MLIS)
- NASA Jet Propulsion Laboratory
 - Machine learning for space exploration
 - Mars rover operations (Opportunity rover)
- Oregon State University
("Machine Learning Challenges in the Real World")
- Artificial Intelligence Advisor for Senator Mark Kelly

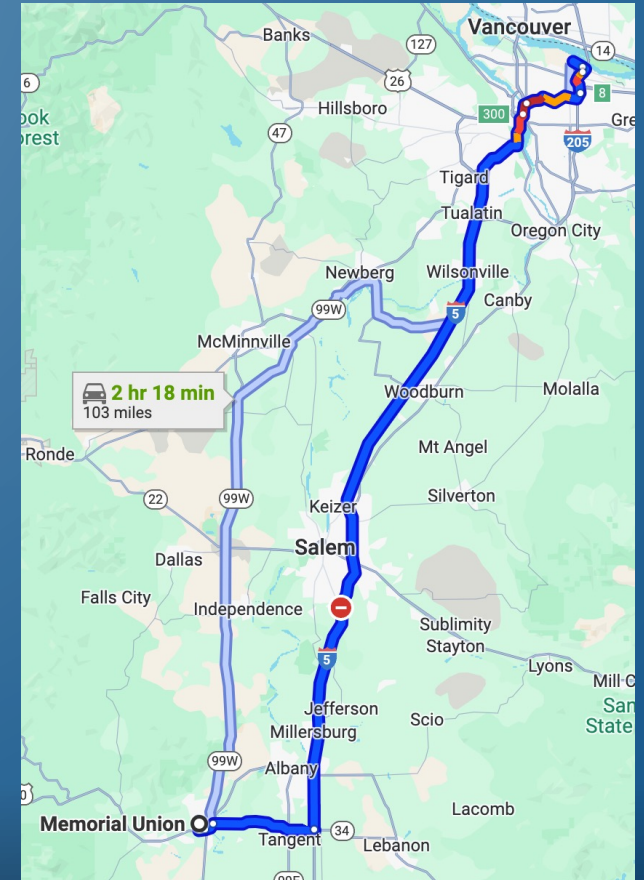

Mars Desert Research Station

U.S. Congress

Do you use AI?

- Unlock your smartphone with face or fingerprint
- Ask a question of Siri, Alexa, Google Assistant...
- Dictate a message or note
- Get driving directions

Do you use AI?

- Play a game with an AI opponent
- Translate text into a different language
- Get book, movie, product recommendations

What is AI?

- There is no widely agreed-on definition
- “Artificial intelligence (AI) is technology that enables computers and machines to simulate human learning, comprehension, problem solving, decision making, creativity and autonomy.” – IBM

Artificial Intelligence

Optimize

- Generate driving directions using a map

Predict

- Identify birds (or mushrooms) using guidebooks
 - Check beak shape, crest, coloring

Artificial Intelligence

Optimize

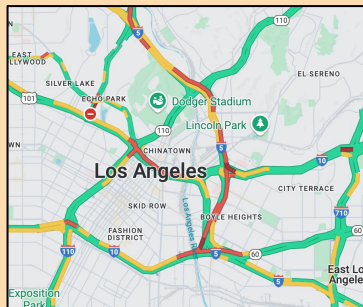

- Generate driving directions using a map

Machine learning

Optimize predictions using data

- Generate driving directions using current traffic

Predict

- Identify birds (or mushrooms) using guidebooks
 - Check beak shape, crest, coloring

Kingfisher

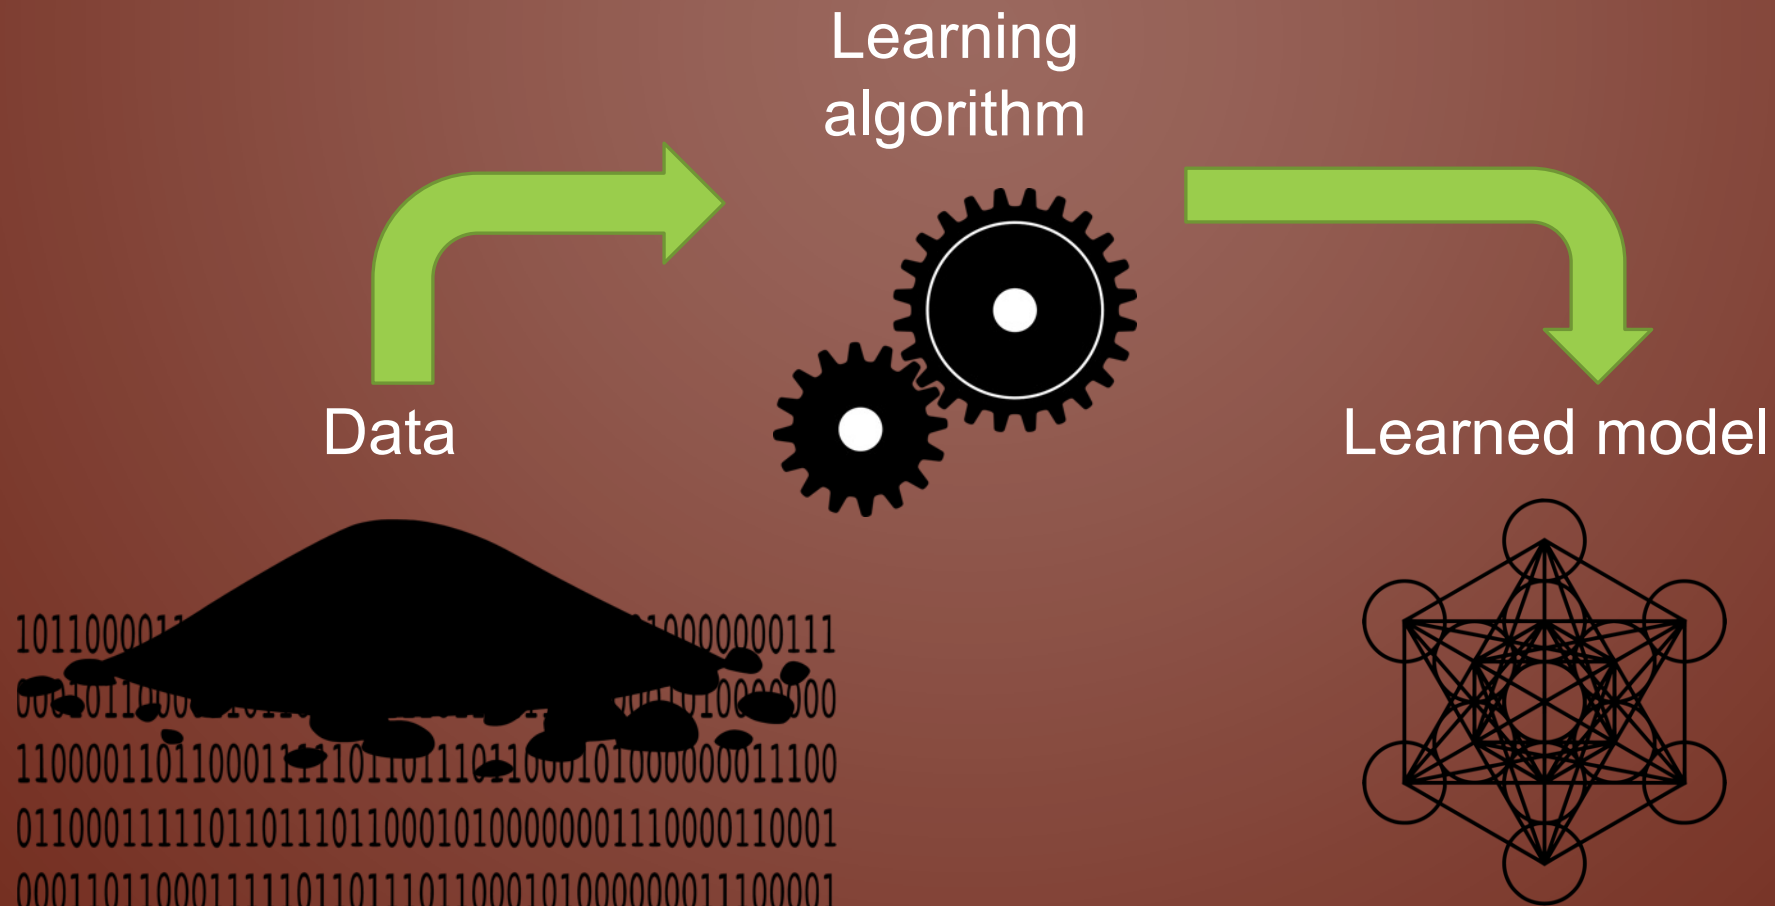

Heron

AI or machine learning?

- Atris – a Tetris-like game with AI players
 - **Hand-written** scoring functions that guide AI search
 - AI players playing against each other (static)
- AlphaGo – an AI model that plays Go
 - **Machine-learned** scoring function that guides AI search
 - Trained on 30M moves, then played against itself to improve further (dynamic)

Machine learning: learn patterns in data

... to enable application to new data

Where does the data come from?

Shopping recommendations

Frequently bought together

+

Total price: **\$17.30**

Total Points: **36 pt**

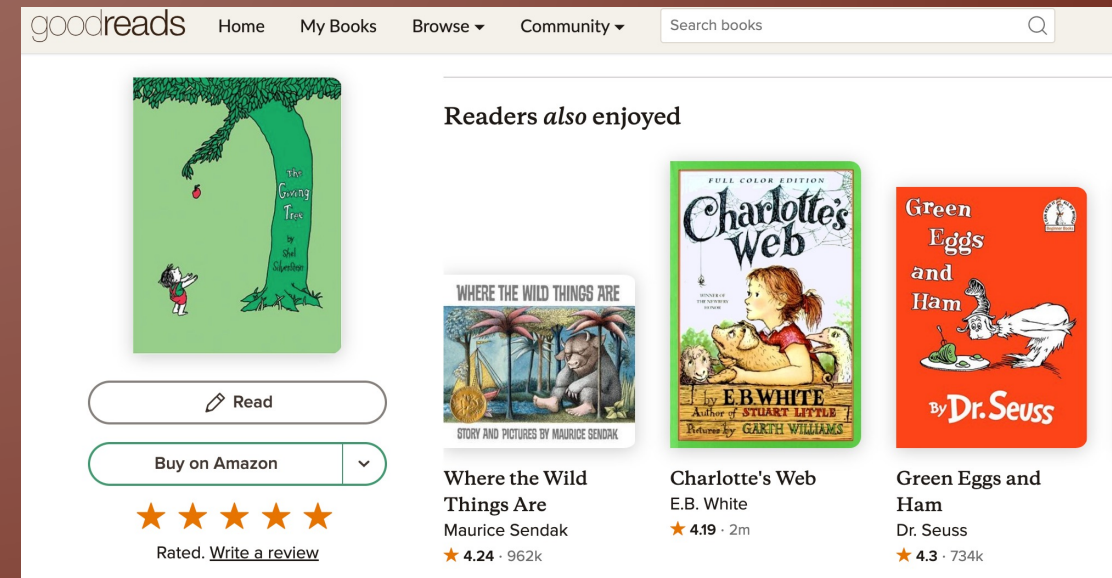

Add both to Cart

✓ **This item:** The Giving Tree by Shel Silverstein Hardcover **\$10.74 22 pts**

✓ The Very Hungry Caterpillar by Eric Carle Board book **\$6.56 14 pts**

Every purchase informs the model

Personalized book, movie, etc. recommendations

The screenshot shows the Goodreads website interface. At the top, there's a navigation bar with links for Home, My Books, Browse, and Community, along with a search bar. Below the navigation bar, there's a large book cover for 'The Giving Tree' by Shel Silverstein. To the right of this cover, there's a section titled 'Readers also enjoyed' which displays three book covers: 'Where the Wild Things Are' by Maurice Sendak, 'Charlotte's Web' by E.B. White, and 'Green Eggs and Ham' by Dr. Seuss. Each book cover in the 'Readers also enjoyed' section includes a star rating and the number of reviews.

Every rating informs the model

We all use (and help train) machine learning models

What is generative AI?

- “Generative” because it generates new data (text, image, music, etc.)
 - Learn probabilities from previous data and create new outputs
- “Large language model” = Generative model learned from (a lot of) text

Fill in the blank

“The cat sat on the _____.”

Possibly:

mat, hat, chair...

Unlikely:

xylophone, dream, golf...

What is generative AI?

- “Generative” because it generates new data (text, image, music, etc.)
 - Learn probabilities from previous data and create new outputs
- “Large language model” = Generative model learned from (a lot of) text

Fill in the blank

“The cat sat on the _____.”

Possibly: mat, hat, chair...
Unlikely: xylophone, dream, golf...

- Generative AI does not have real-world experience
- Generative AI does not reason, analyze, deduce (or think)
- Generative AI is not sentient

Spotting AI (and ML) - Obvious

Hi Kiri!

I'm your PayPal Assistant and always here to help. I'm still in beta testing, so talking to you helps me learn.

I noticed that your recent transaction for 23.64 USD was declined. Can I help you get more information?

Finance demands facts, not creativity

Maslow's Law of the Instrument (1966)

If the only tool you have is a hammer,
it is tempting to treat everything as a nail.

How can we make it better?

1. Government action –
legislation, regulation, enforcement
2. Developer decisions about
design and user guidance
3. User / consumer education
and empowerment

1. Government action

How can we balance the drive for innovation with meaningful protection?

Data privacy

- The U.S. lacks federal data privacy legislation, but many states have created their own laws
- Oregon (July 1, 2024): right to access, correct, copy, delete your personal data

1. Government action

How can we balance the drive for innovation with meaningful protection?

Deepfakes and deception

- Oregon SB 1571 (March 2024): requires disclosure of AI-generated content in campaign materials
- Oregon Unlawful Trade Practices Act (1971): **illegal** to use AI for deception, misrepresent AI system capabilities, fail to disclose AI product defects, etc.
- Take It Down Act (passed by U.S. Senate): **illegal** to post non-consensual intimate images, including digital forgeries, and users can request removal

2. Developer decisions

How to set realistic user expectations?

What can I help with?

Diagnose my pain

3. User education and empowerment

What questions should you consider before using an AI product?

1. What was it trained on?
When can I trust it?
2. What data will it collect about me?
(What am I sharing with it?)
3. How will my data be used?

How can users make informed decisions?

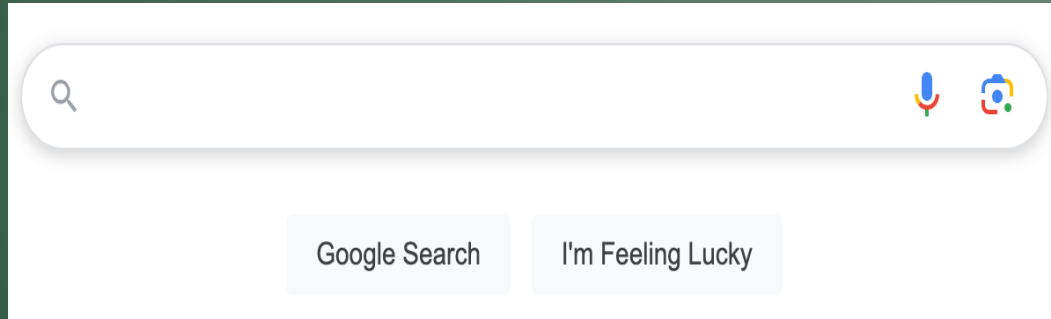

Example: Do you want a car insurance discount for allowing the company to track you?

3. User education and empowerment

These tools look almost the same, but they aren't!

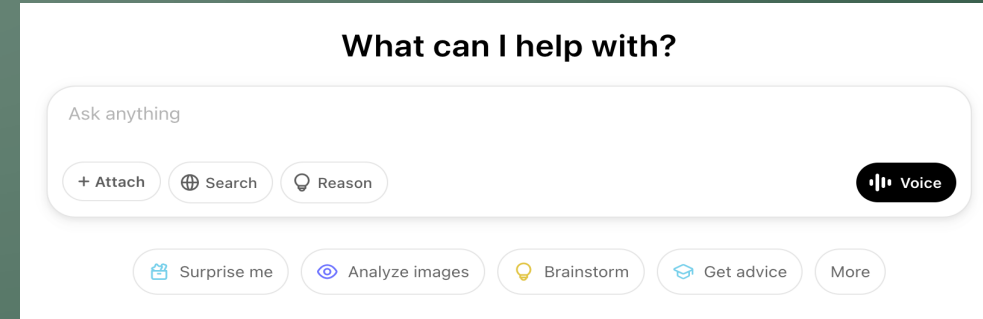

How can users make informed decisions?

Search engine - finds real matches

Detective

Generative AI (chatbot) - generates new content

Artist

Choose your tool to fit the task

3. Consumers LEARN AI Act (2024)

Consumer Literacy and Empowerment to Advance Responsible Navigation of Artificial Intelligence Act

How can users make informed decisions?

National strategy

Multilingual public campaign

Specific use cases

- Personal finance
- Healthcare recommendations
- Communication
- Creative works
- Business management

- AI capabilities and limitations
- Where AI is or can be used in daily life
- Best practices: data privacy, legal considerations, evading deception

Summary – The State of AI

- AI technology simulates human intellectual activities
 - Much of AI is powered by machine learning – trained on data
 - Generative AI creates new content based on patterns in previous data
- Generative AI systems cannot assess truth, only plausibility, of content

1. U.S. legislation and regulation (so far) has been mostly quiet on AI
2. AI companies can do a better job of communicating strengths and limitations
3. You can make informed decisions about when and how to you use AI
